

POP FACES

Do you want to know what celebrity is in front of you?

With the new PopFaces app, it is now possible to recognize who you are looking at in a second.

Just point your mobile phone at any screen, banner, poster or magazine and instantly find out who you are looking at (if the person is a celebrity and/or famous). If this celebrity is not yet in our database, then we will show you who he/she looks like. Our app gives you the power of facial recognition in the palm of your hands to get relevant information about the famous person immediately.

Open the App Step One

Open the app and sign in with your account

Scan the Face Step Two

Start scanning your screen, poster or other image you are interested in.

Read the Info Step Three

The app will quickly use its curated database to recognize and provide information

Recognition Mode

Choose Category

It is very important to choose the category you need. Models will only be recognized with the selected **FASHION** category, while actors are recognized through the **CINEMA** category.

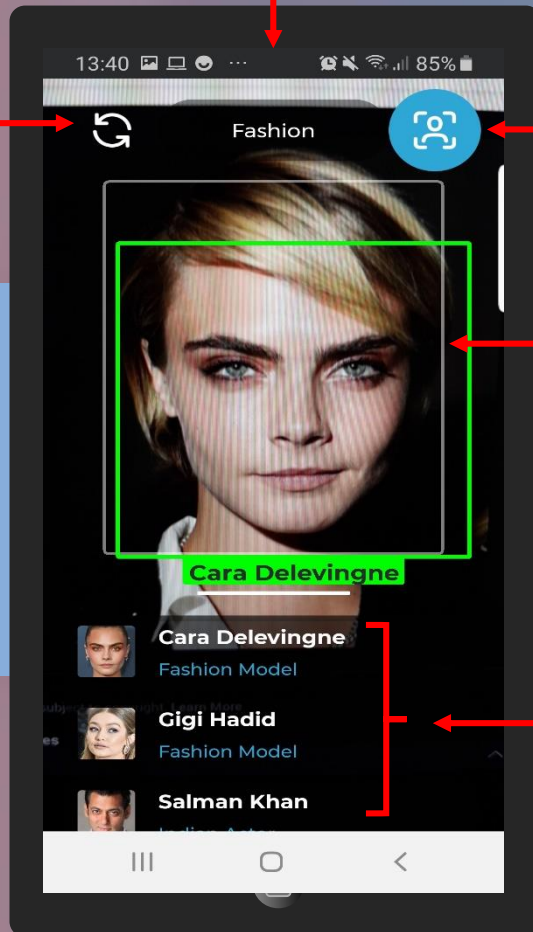

Selfie Camera Mode

When you turn on the Selfie camera mode, we will try to see if someone from our catalogues looks like you. Naturally this is meant for entertainment purposes..

Brightness and Contrast

When recognizing a person on a TV screen, it is important to pay attention to **the brightness and contrast** of your TV. If the phone camera does not see the face, but only a white spot, recognition will not occur.

Button to Catalogue Mode

By pressing this button you will switch from recognition mode to catalogue viewing mode.

Recognition Zone

Recognition occurs when a face enters this frame. If the face goes out of the frame, recognition stops.

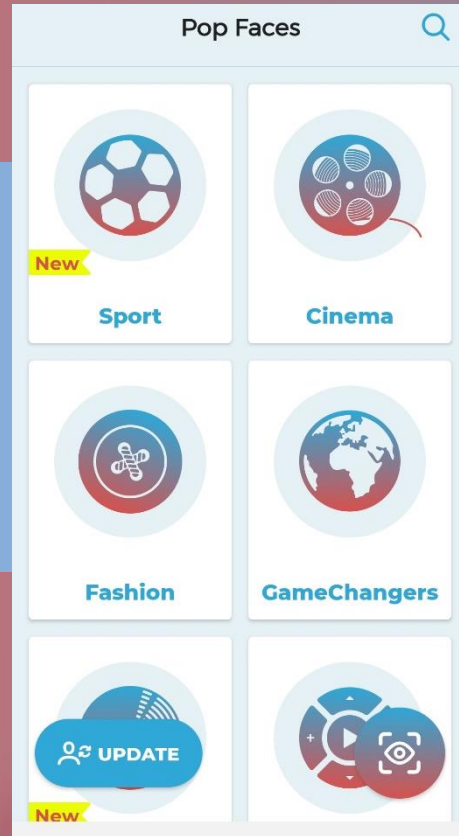

Earlier recognized faces

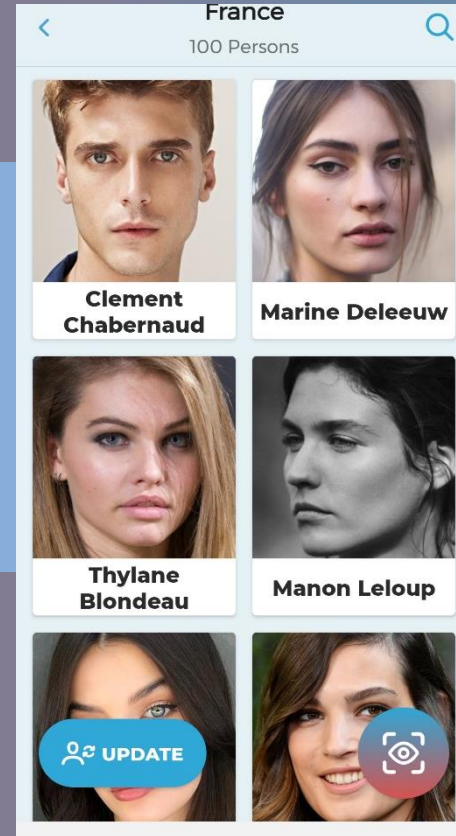

This list allows you to see the details of previously recognized people. The list can be pulled up (extended) for the whole page.
